**BrilliantColor™ Technology and Mitsubishi Electric's Engineering Yields Superior Color Performance**

BrilliantColor™ Technology is Texas Instruments' latest innovation for richer colors and better imaging for vibrant displays. At Mitsubishi Electric, we developed a 6-segment color wheel that includes RGBWYC. Apart from the typical red, green, blue and white, we added yellow and cyan segments to display a wider color spectrum. In addition, we coded our color algorithms to emphasize brightness or color modes, designed to match the environment where the EX53U is used.

Together with selective lamp powered modulation techniques, the EX53U with BrilliantColor™ technology acts intelligently to boost colors to improve the intensity and vibrancy of an entire display. For instance, when projecting an already-bright screen image, the lamp is programmed to provide brighter, more vivid colors. In contrast, if the image shows genuine color reproduction, the algorithm delivers just the right colors with the appropriate radiance for maximum visual impact.

\*BrilliantColor is a trademark of Texas Instruments.
